PALOMAR OBSERVATORY
Until the moon will be visited by man, most of our lunar information must be gathered by high power telescopes like the one on Palomar Mountain in California. This Hale Telescope photographs stars millions of miles away. Using a 200 inch circular mirror, it focuses starlight and magnifies it so we can study the far off heavenly bodies.

FIRST SERIES OF 25 CARDS

MYSTERIES & WONDERS of the World

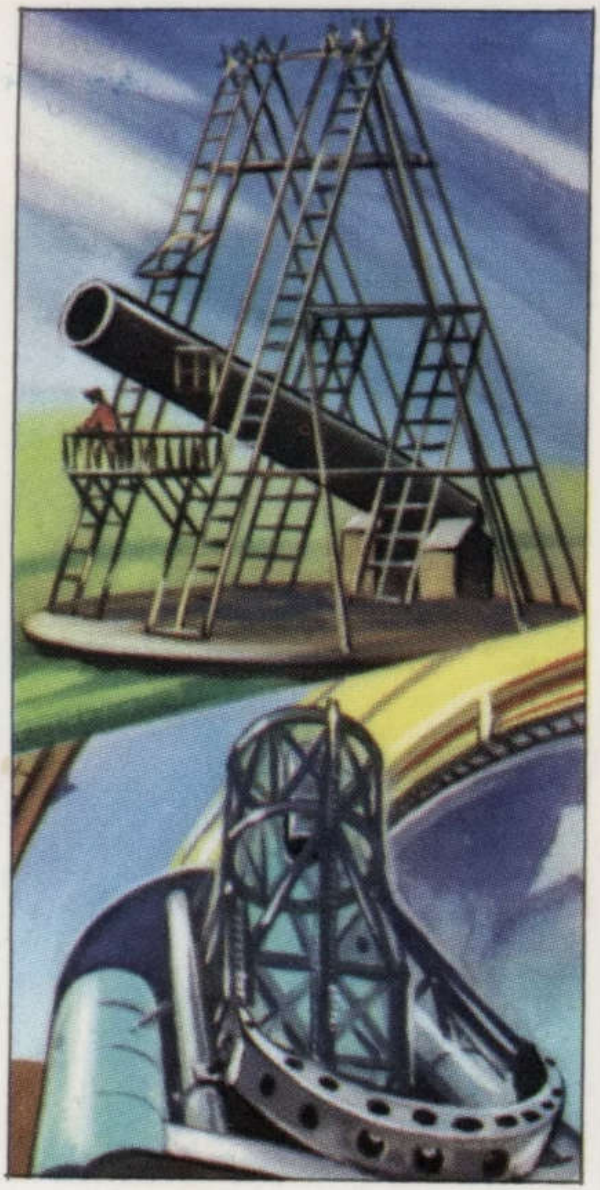
No. 5

Largest Optical Telescope

At Mount Palomar in California is the World's largest optical telescope. It is a reflecting telescope, and the astronomers gaze into a gigantic mirror 200 inches across. With this instrument much knowledge has been gained of the Universe, and many stars and galaxies of stars have been discovered, and many new details of known stars and planets have been gained.

Coopers Tea

Cards in all packets of Coopers Tea. Get your picture card album from your grocer or from Coopers Tea, Herbert Street, Glasgow, N.W. Price 6d.



THEN AND NOW

A SERIES OF 25

No. 9
TELESCOPES

Sir William Herschell and his son John built many telescopes and their ' Giant ' shown here was finished in 1789; it had a mirror 4 feet in diameter and about 40 feet long. The largest telescope ever made is the Hale Reflector on Palomar Mountain, California. Its main mirror is 200 inches wide and it weighs 14½ tons. Astronomers take a lift up to the observer's cage.
